

TeleMED Press Release

DynaLIFE Dx extends agreement for ECG data management solution

TeleMED Diagnostic Management Inc. (TeleMED), announced today that DynaLIFE Dx (DynaLIFE), a leading provider of quality diagnostic laboratory services in Alberta, will be continuing to use TeleMED's ECG data management solution.

Since 2007, DynaLIFE has depended upon TeleMED's user-friendly and efficient technology for the collection, sharing and storage of its vital ECG data throughout its network of Patient Service Centers. At the core of this partnership is a unique technology that automates and accelerates workflow in all of the pre-analytic, analytic and post-analytic stages of processing. Turnaround on test results was reduced from days to hours. As a result, during the past five years, ECG revenues have multiplied, associated costs have been reduced and profitability has risen dramatically.

Asa Lebel, President of TeleMED Diagnostics commented: "We are delighted that we will be continuing our collaboration with DynaLIFE. This renewal validates the value of TeleMED's ECG data management technology and DynaLIFE's ability to grow its business and serve the public by promoting the improvement in care that the technology enables it to offer to its patients. At a time when the standard and affordability of healthcare are in the spotlight, it is increasingly important for TeleMED to contribute trustworthy and cost-effective solutions for managing medical diagnostic data."

About TeleMED

Since its incorporation in 2000, TeleMED has been a pioneer in telehealth technology solutions for the management of ECG and other vital-sign tests. Each year, medical laboratories use TeleMED technology to process over 1 million tests, at over 700 locations across Canada. TeleMED's cost-effective solutions accelerate test-processing cycles by days, relieve clinicians from the burden of administrative tasks and improve the precision and integrity of test data. Headquartered in Ontario, TeleMED maintains offices in Toronto, Vancouver and Edmonton.
