

TeleMED Press Release

TeleMED Partners With GDML for Holter Management Services

Gamma-Dynacare Medical Laboratories (Gamma-Dynacare) has once again selected Telemed Diagnostic Management Inc. (TeleMED) to provide its electronic solution for Holter data management.

Because of this collaboration, a Gamma-Dynacare patient has the opportunity to book an appointment at a local Patient Service Centre, be tested and receive a diagnosis from a physician who is a cardiac specialist, all within a one week period. For many, this represents an attractive alternative to waiting for weeks for an appointment and travelling to a hospital or cardiology clinic to be tested.

Asa Lebel, President of TeleMED stated, "We are pleased to continue our partnership to provide quality Holter monitoring services to Gamma-Dynacare's patients. The integration of Gamma-Dynacare's wide network of testing sites with TeleMED's unique solution for managing Holter data ensures that a patient can have easy and quick access to the expertise of a cardiac specialist."

About TeleMED

Since its incorporation in 2000, TeleMED has been a pioneer in telehealth technology solutions for the management of ECG and other vital-sign tests. Each year, medical laboratories use TeleMED technology to process over 1 million tests, at over 700 locations across Canada. TeleMED's cost-effective solutions accelerate test-processing cycles by days, relieve clinicians from the burden of administrative tasks and improve the precision and integrity of test data. Headquartered in Ontario, TeleMED maintains offices in Toronto, Vancouver and Edmonton.
